## What Ailed Him.

A good story is told at the expense of a gentleman of Las Vegas. When snow began falling it was noticed that he was unusually agitated, and when ever had. The new company has plen- was done, the storm was prolonged, the snow falling faster and faster, he became uneasy in proportion. His acquaintances fear d that he might be ill and mistrusted that he was threatened with a fever. All their entreaties 'to consult a doctor were bluffed with "oh, it's nothing: I'm well enough" etc., etc. But it was mighty unsatisfactory to those who were interested in his welfare, and became more and more solicitous as the symptoms became more aggravated. Finally one of his intimate friends gave away a secret, after he had laughed himself sore over what to him was a huge joke. It was then learned that the young man was intending to leave for the east to-day, ostensibly on business. His real mission, however, was to attend hisown wedding, and he was made wretched, fearful that he might be delayed on the way by the accumulation of snow.

## Dona Ana Deviltry.

A despatch to the New Mexican, dated Mesilla, states that Sub-grading Contractor Mann, of the A. T. & S. F., was found Sunday morning sitting down with his back against a wall near the fire place in a room in Doña Ana, stone-dead, having been murdered Four shots had been fired into his body and afterwards, presumably with the intention of removing all evidences of the crime by burning the body, fire had been thrown around him and upon his body, the corpse being badly burned when found. As soon as the crime was discovered Sheriff Southwick started out in search of the murderer and returned to Mesilla this evening with the criminal, Frank Clark, who was placed in jail. Clark acknowledges that he is the murderer, but gives no reason for the commission of the deed. There is a good deal of talk here of lynching the prisoner, but Sheriff Southwick says he will permit of no interference with the course of the law.

The Jicarillas. Nearly all the machinery for sinking wells in the Jicarillas has been purchased in the east and some of it is now on the road. The requisite machinery for sinking wells to a depth of 2,500 feet has been bought, and the prospect is that there will soon be an abundance of water. The company engaged in this enterprise has a number of rich placer claims and ledges, and all that is needed to develop them is water. As soon as they have this in abundance they will begin operations. The Jicaril'as are wonderfully rich in mineral but lack of water has kept the rich prospects from being opened up.
